

E-MEDSYS EHR AND GRESHAM WOMEN'S CLINIC: KEEPING LABOR IN THE LABOR ROOM

Cari Loeb of Gresham Women's Clinic in Gresham OR knows the importance of being able to quickly move from patient to patient, in a multi-physician ob-gyn setting.

"The **e-Medsys EHR** is an unbelievably dynamic tool that helps our physicians treat patients in a streamlined, efficient and paperless world. Encounters are quickly captured. Data on initial visits such as family history, medications, allergies, and so on are instantly entered into the patient's record."

"Treatment plans, obstetric charting, ultrasound data...the entire spectrum of ob-gyn related data easily becomes part of the patient's **e-Medsys EHR** record. Files and paper charts are done away with, and locating the patient's information is effortless," says Cari."

Gresham Women's Clinic benefits from using **e-Medsys EHR** in so many other ways.

E-MEDSYS EHR CONTENT FOR OB-GYN INCLUDES:

- | | |
|--|---------------------|
| * Initial Obstetric / Initial Gynecology / Prenatal Visits | * LEEP Procedure |
| * Incontinence / Infertility / Pregnancy Test templates | * Ectopic Pregnancy |
| * Uterine Prolapse | * OB Ultrasound |
| * Endometriosis | * Post-Partum |
| | * Colposcopy |

e-Medsys EHR represents the ideal solution to reducing labor at your practice, giving you more time to tend to the "correct" labor!

The system **Prescription Manager** is highly comprehensive. Physicians can issue prescriptions directly from the patient's record in **e-Medsys EHR** and have it transmitted directly to the patient's pharmacy. At the same time, medications prescribed are retained in the patient's record, and issuing **refills** is a snap.

Medications are prescribed based on **formularies**, and the system also alerts on **allergies, interactions** and **expirations**. Then, **identifying groups of patients by medication** is incredibly easy, should that be needed.

Ordering **lab tests** is done using similarly simplified mechanics: directly through the patient's **e-Medsys EHR** record, the physician can order lab tests via our integration with several major labs. The orders become part of the patient's record, and the **results are transmitted from the lab directly back into the patient's e-Medsys EHR record**, totally automating this normally tedious process.

The practice is alerted as results come back, with special notations on abnormalities.

The system's built-in **Health Watcher** ensures that patients who need follow up treatment based on their medical condition are identified and alerted. The practice is also alerted to patients requiring follow up care.

PracticeOne's own E / M Coder works to ensure that not only correct codes are used to prevent undercoding and overcoding, but that *optimal* codes are used, **resulting in maximum reimbursements.**

The high cost of **malpractice insurance** is of particular concern to **Ob-Gyn** practices, and the **e-Medsys EHR** may help reduce these costs. Also of particular concern to **Ob-Gyn's** is the need to **view patient data at all hours of the day and night.** **e-Medsys EHR** makes that as simple as the nearest Internet connection! Via secure Internet connectivity, authorized providers **can easily view patient clinical and medical data.**

As Cari Loeb noted above, **e-Medsys EHR** is seamlessly integrated with **e-Medsys PM** creating an overall solution for the practice. Diagnoses and procedures are captured through **e-Medsys EHR** as part of the encounter, and are automatically input into **e-Medsys PM** system.

When patients stop at the front desk before leaving, **all of their procedures, diagnoses and fees** have already been input, *eliminating the need for office staff to handle this via paper superbills.*

Discover the variety of ways **e-Medsys EHR** can impact your practice for the better by contacting **PracticeOne** at **877-363-3797, Extension 2922** to schedule an overview of our **e-Medsys EHR.**
